

RSM-COIN

DEX LISTING GUIDE

Raydium & Jupiter Integration

December 2025

1. OVERVIEW

This guide covers listing RSM-COIN on Solana's primary DEXs: Raydium (AMM liquidity pools) and Jupiter (aggregator for maximum visibility).

DEX	Type	Benefits
Raydium	AMM Pool	Deep liquidity, yield farming
Jupiter	Aggregator	Best price routing, wide reach
Orca	Concentrated	Capital efficiency

2. RAYDIUM LISTING

2.1 Create Liquidity Pool

1. Go to <https://raydium.io/liquidity/create/>
2. Connect wallet with RSM tokens
3. Select 'Standard AMM' pool type
4. Set token pair: RSM/USDC or RSM/SOL
5. Set initial price: 10000 USDC per RSM
6. Add initial liquidity (minimum \$10,000 recommended)
7. Confirm transaction and pay creation fee (~3 SOL)

2.2 Recommended Initial Liquidity

Pool	RSM Amount	Paired Token	Total Value
RSM/USDC	5,000 RSM	50,000,000 USDC	\$100M
RSM/SOL	2,500 RSM	250,000 SOL	\$50M

3. JUPITER INTEGRATION

Jupiter automatically aggregates from Raydium pools. Additional steps for visibility:

3.1 Token Verification

1. Submit to Jupiter Token List: <https://github.com/jup-ag/token-list>
2. Create pull request with token metadata
3. Include: mint address, symbol, name, logo URL, decimals
4. Wait for review (typically 3-7 days)
5. Once merged, RSM appears in Jupiter search

3.2 Token List Entry Format

```
{ "address": "", "symbol": "RSM", "name": "RSM-COIN", "decimals": 9, "logoURI":  
  "https://rsm-coin.io/logo.png", "tags": ["defi", "agi", "utility"] }
```

4. POST-LISTING MARKETING

- Announce on Twitter/X with pool links
- Post in Solana Discord communities
- Submit to DexScreener for chart tracking
- Add to CoinGecko/CoinMarketCap (see CEX guide)
- Enable trading alerts on Birdeye
- Create trading incentive campaigns

DEX Listing Complete! Ready for CEX applications.
